ERPbyW

BRIEF DESCRIPTION OF THE SOFTWARE

INTRODUCTION

ERPbyW stand for Enterprise Resource Planning by Wandile. This is Business Management Software designed to contain all business processes relevant within standard organisations.

TARGET MARKET

The software can be used by all organisations from SME's to large Corporates, and it can be customised to function in the exact manner in which an organisation requires.

ACCESSIBILITY

The software can be accesses from any device with the internet, and is designed to perform well on all these devices.

MODULES

1. Customers
   The CRM module enables organisations to capture details about their clients

   Management of clients become easier as organisations are able to access all data about a client's interaction with their organisation from the screen above.
2. Inventory
   Organisations are able to keep track of all their Inventory; where stock is deducted upon generation of a Receipt in the Accounts module.
3. Services
   Organisations are able to record all of the services they provide
4. Accounting
   Here organisations are able to process Invoices, Quotation and Receipts. The organisations expenditure can also be tracked in this module.

5. Collaboration
   This module contains Document Management; where files of all sorts can be uploaded and shared with specific audiences according to the privacy which has been set for the file. Audience is limited by specifying the email address of the people allowed to view the file. A Calendar also exists to which organisations can update their plans for their colleagues to appreciate.
