INTRODUCTION

In order for your business to realise growth, the daily processes need to be automated and data captured vigorously as ERPbyW enables. This is the fundamental activity for organisations seeking rapid growth as once this core aspect of managing your business is in place, the organisation will essentially have a Data Warehouse from which Data Mining activities can occur. Data Mining can be defined as extracting data to provide meaningful information.

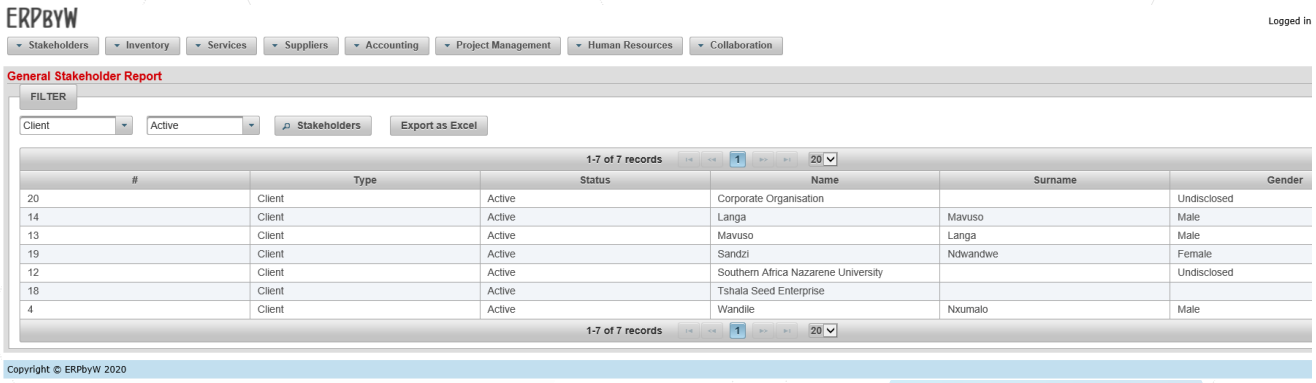

This document describes how after effectively using ERPbyW in your daily activities to capture data, you can review the captured data in a more meaningful manner. The Reports and Dashboards contained in ERPbyW enable Executives, Supervisors and other staff members to monitor and analyse their departments in real-time providing comprehensive information.

REPORTS BY MODULE

Reports extract basic information about a module's general activities and sometimes contain indicators to filter by. Each report can be exported to Excel.

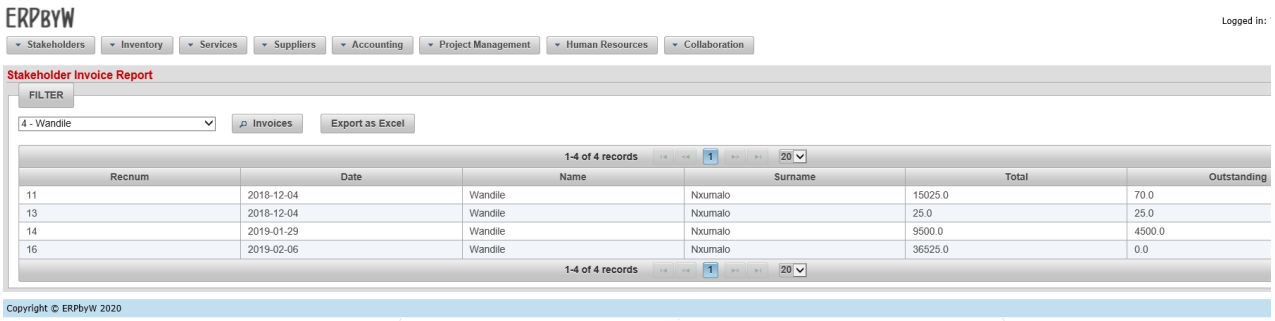

1. Stakeholders v

i. General

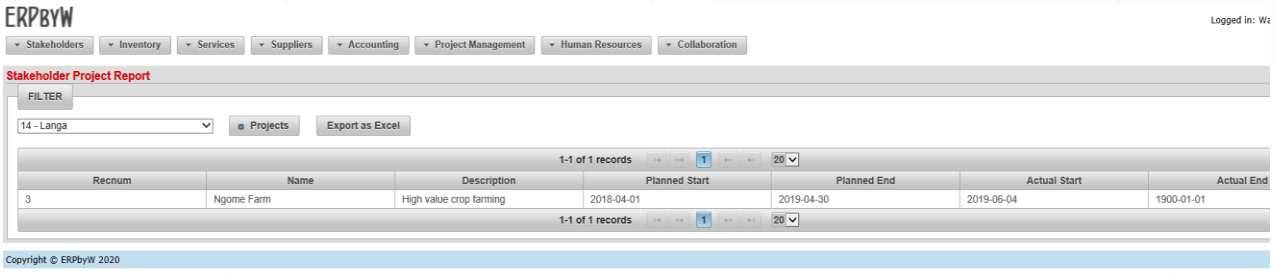

The General report allows filtering by *Type* (Client/Partner) and *Status* (Active/Inactive). The generated report displays matching records containing general details of the Stakeholder.

ii. Invoices and Receipts

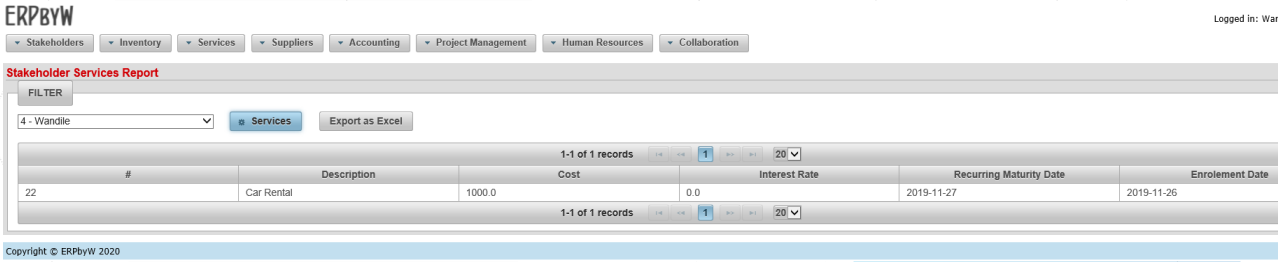

This report allows filtering by the actual *Stakeholder*. Once filtered, the report generated will display all Invoices\Receipts created for the Stakeholder ordered by the *Date.*

iii. Projects

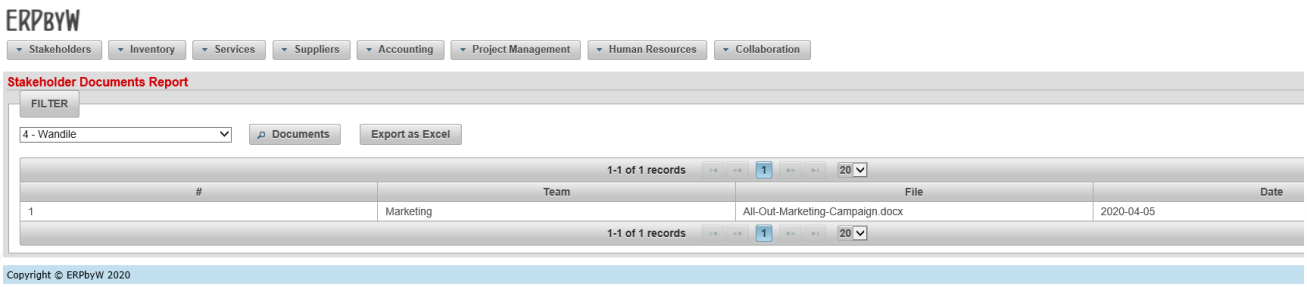

The Project report allows filtering by the *Stakeholder.* It will display all projects the Stakeholder has been or is currently specified as a stakeholder in the Project Management module.

iv. Services

The Services report also filters by the *Stakeholder*. This report display all services for which the stakeholder has been enrolled or is currently subscribed to.

v. Shared Documents or Files

Here you are able to view all documents which have been shared with the Stakeholder in the Online Collaboration module. The stakeholder may have contributed to important discussions which occurred around the document or file.

Stakeholder Dashboard

The dashboard presents graphical representations of certain indicator performance.

The *Stakeholder Line Chart* shows a representation of new stakeholder registrations over the specified period.

The *Type Pie Chart* displays the proportions of *Client* versus *Partner* stakeholders contained in the database.

The *Gender Pie Chart* displays the proportions of *Male* versus *Female* stakeholders contained in the database.

The *Status Pie Chart* displays the proportions of *Active* versus *Inactive* stakeholders contained in the database.
