Overview

Companies often spend exorbitant amounts of money on ERP Software and realise after its implementation, that the product is not really suitable for their organisation. With over 20 years' experience in software development, we guarantee timely and cost effective ERP implementation; ensuring all of your business processes are precisely incorporated. We began software development in 2002, and have observed all the trends to-date. We put these into consideration depending on the requirements and budgets brought forward, and this enables our ERP implementations to be friendly towards lower budgets. This is also due to that we develop our software to run optimally on low specification hardware or equipment, keeping the percentage of costs mostly towards the actual software and our services. NB: The presentation is not a prototype but a working solution that is ready for implementation unless there are customisations.

The Problem

- Expensive software implementations
- Several systems implemented that operate independently
- Off the shelf systems that are not easily customisable
- Implementing systems designed for use in foreign territories
- Expensive maintenance and support that is not readily available

The Opportunity

- Consolidate and enhance business processes
- Reduce operational costs
- Promote collaboration and productivity within the organisation
- Improve Customer Relationship Management
- Enable efficient Project Management
- Provide efficient data capturing and monitoring
- Promote employee productivity

CRM

ROI is immediately observed upon landing on the dashboard page; where certain metrics in the form of charts, are displayed.

The CRM module currently captures basic details about your clients. The key performance indicators that you wold lie to track in the metrics and realise ROI can be customised.

The module enables efficient communication with clients or stakeholders through sms and email.

Interactions by the client/stakeholder with your organisation, can be tracked from this module. These include Receipts, Invoices, Projects and Services rendered.

ACCOUNTING

All financial transactions that occur on the system are recorded in the Journal. The dashboard displays this journal and you can observe your cash flow history.

Payables

This module allow for the creation of;

- Purchase Requisition based on current Inventory the reorder levels
- Purchase Requisition
- Purchase Order
- Delivery Note
- Purchase Invoice

Receivables

This module allow for the creation of;

- Point of Sale (PoS)
- Quotation
- Sales Order
- Sales Invoice
- Receipt
- Credit Note

Chart of Accounts

A standard Chart of Accounts is available upon which you can define all of your assets, liabilities, receivables, payables etc. These accounts can be charged and their transactions recorded in the journal.

PROJECT MANAGEMENT

This module allows for the management of projects by keeping track of associated stakeholders, task and their activities and project inventory. You are able to observe project progress through a Timeline, Kanban and reports.

HRM

The HRM module provides a comprehensive platform to record employee data and process payroll. You can define benefits, deductions, leave, training and process payroll.

COLLABORATION

This module was developed upon the concept of remote working. It allows for documents to be uploaded and share on to the platform; then discussed by a defined group until a consensus is reached.

An Event Calendar exists where your organisations administration and employees can set up events on calendar for everyone to observe.

WORKFLOW

Although the software contains modules that will process most organizational processes; it also allows for custom workflows to be defined when necessary.

You can create new forms, capture data and view reports about a custom module; and view a workflow diagram displaying the entire process flow.

MORE MODULES

Modules supporting those already mentioned include the Inventory, Services and Supplier modules.

There also exists an Access Module that provides a simple clocking solution you can use for your employees to check in and out of the office.

OTHER SERVICES PROVIDED

I also offer Smart Card development that can be integrated into the ERP system. Examples of relevant applications in this regard are Employee Access Cards, Mobile Wallets, Customer Loyalty Cards etc.
