PAYROLL

Introduction

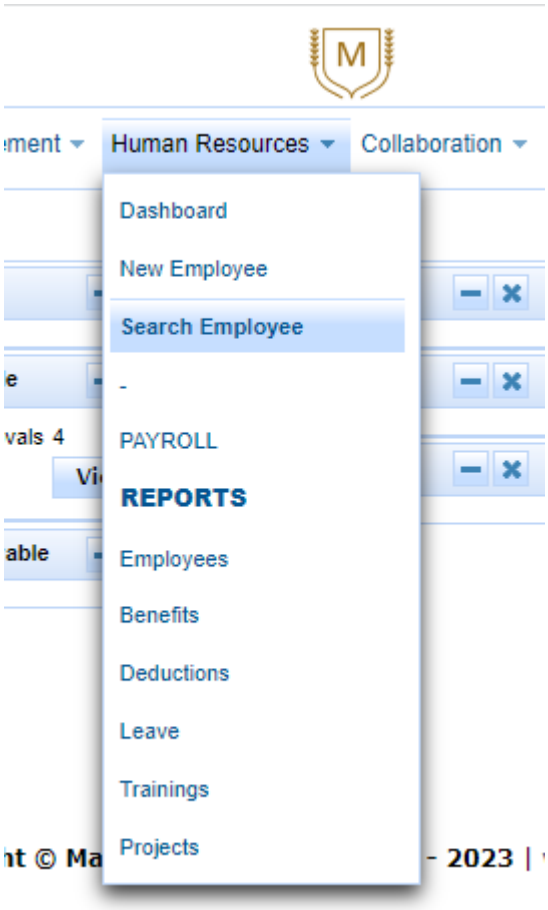

The Human Resources module of Machuzu ERP allows for detailed employee data to be captured into the system. This data is used within several modules of the system, allowing all available processes in which an employee is engaged to capture this data and provide a permanent link to the employee for future reference. The Payroll component of the HR module is no different and this document describes the processes of Payroll.

1. **Employee Definition**

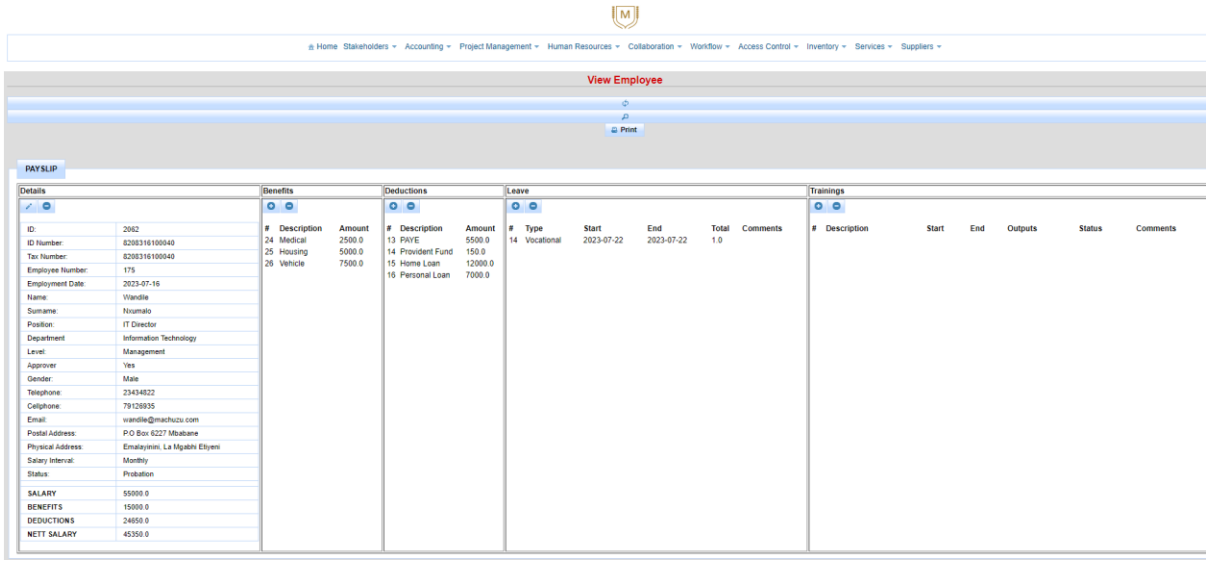

To define a new employee, click on '*New Employee*' as above. Enter all required and relevant data, then click on '*Save'*.

2. Employee Package Definition and Payslip Management

Click on *'Search Employee'* to bring up an employee's record. Enter their *ID Number* or *Name* and *Surname* to search. Then click on the employee you would like to define package data for.

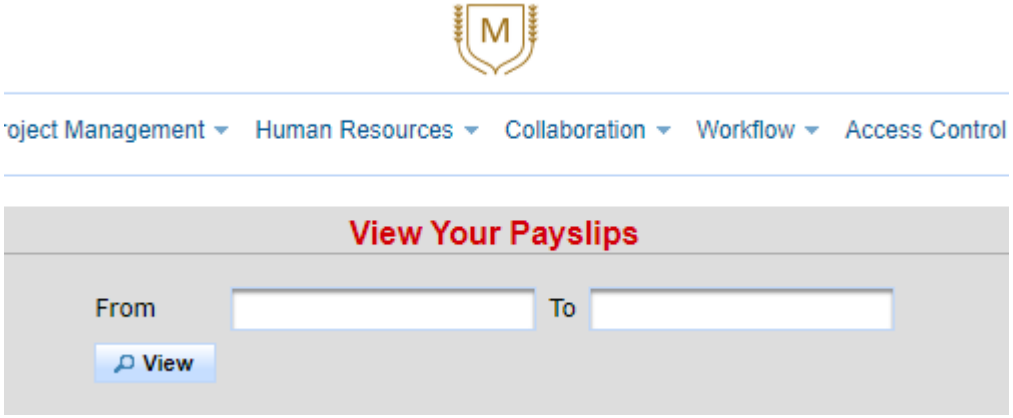

The above screenshot displays an employee record with package data already defined. Click on  to add package data. As it can be observed, the employee already has *Benefit* and *Deduction* data defined.

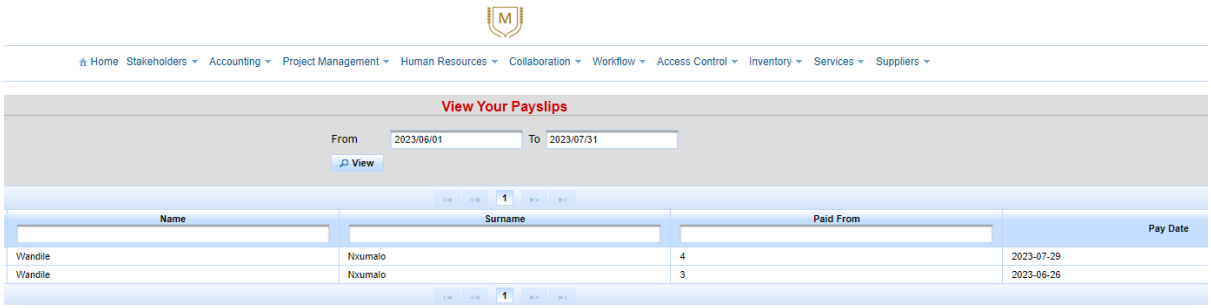

The screenshot displayed above is essentially the Payslip itself.

To print the payslip click on  . Most computers come with printing to PDF already existing, so you can print to PDF and send by email, or print directly to a paper printer.

If you need to retrieve an old payslip, click on  . The following screenshot appears;

Given that Payroll can be processed any day of the month, enter the 1st day of the month for *From* and the last day of the month for *To,* then click on '*View*'.

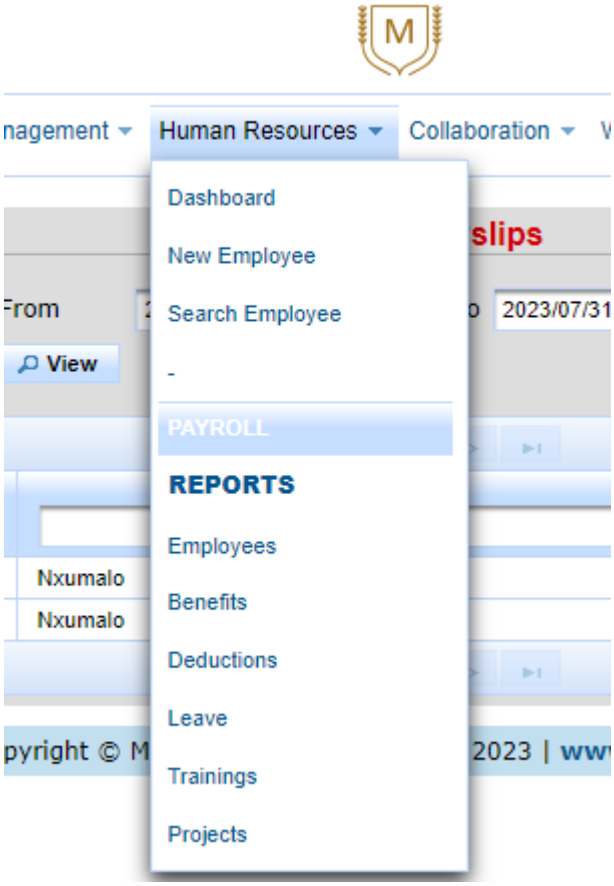

As can be observed above, Employees can be filtered for several months.

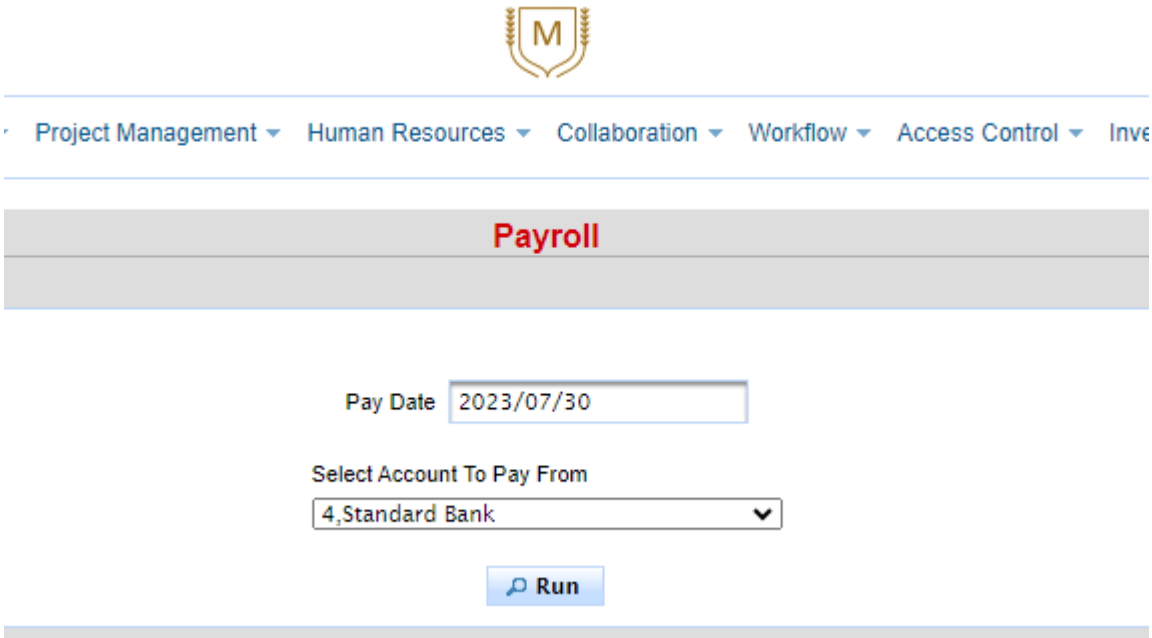

Click on the payroll record for which you would like to view more details and you will be redirected back to the Payslip where you can view details and print if necessary.

3. Payroll Processing

Only the Payroll Officers are allowed to view this module.

After clicking on Payroll, the screenshot below appears;

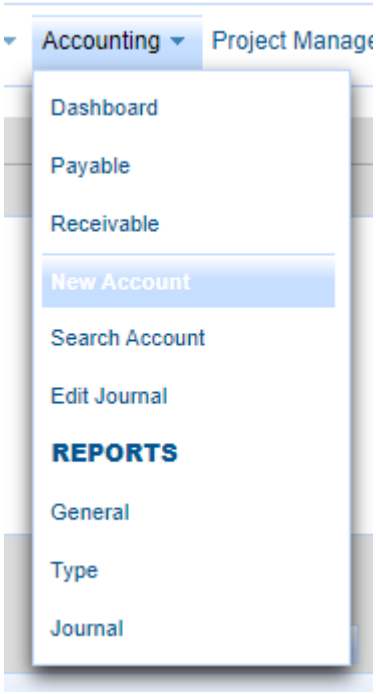

All the Payroll officer has to do is enter the Pay Date, Select an account from which the salaries are paid, then click on '*Run*'. The payroll for that month will be processed and payslips generated as previously described.

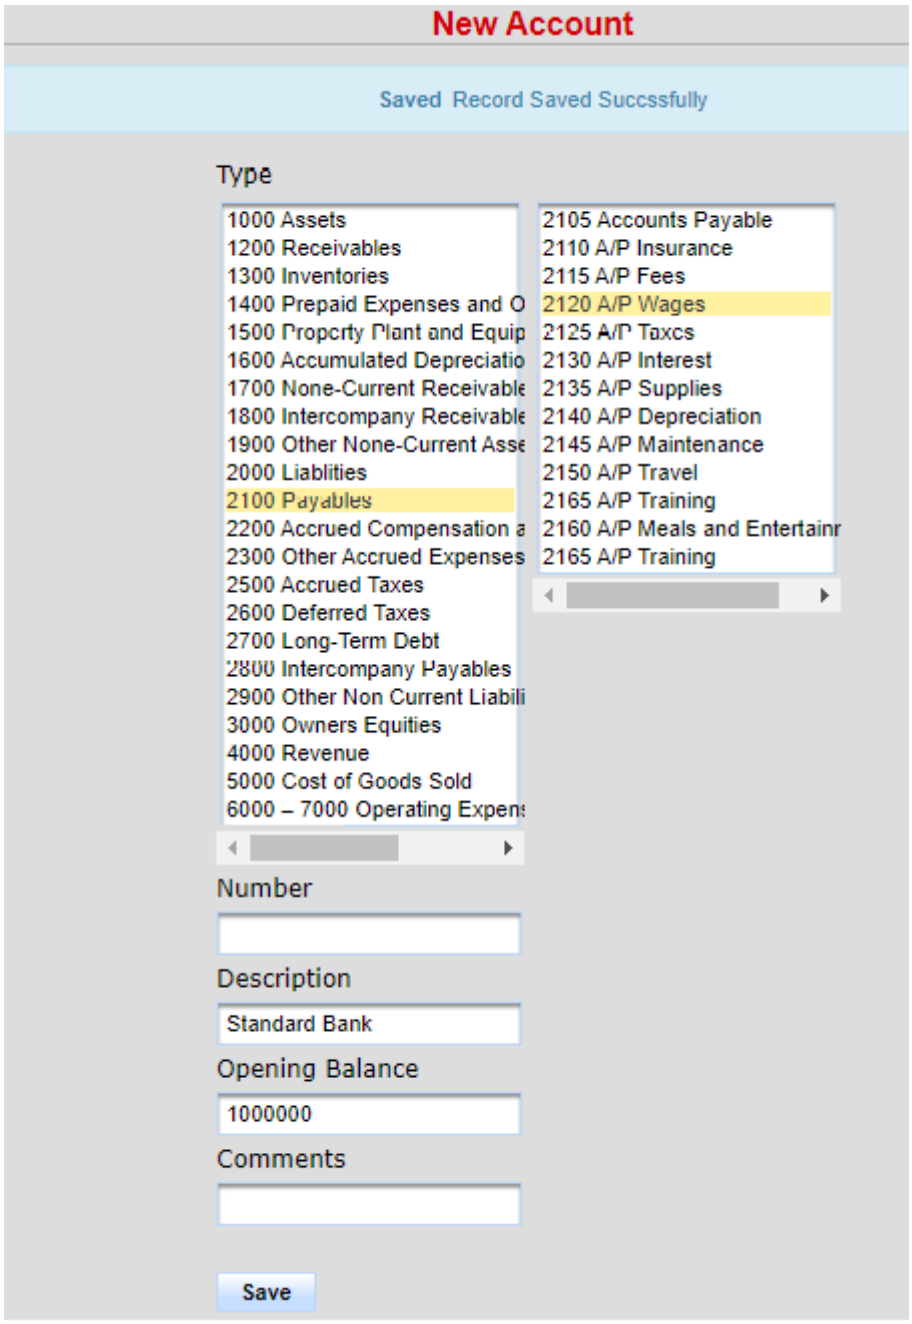

4. Bank Account Definition

An account needs to be defined, from which the salaries will be paid. This allows the system to allocate the appropriate adjustments in the Accounting module.

To define a new account follow the below screenshot;

The Accounting module has pre-defined standard accounts already existing in the system. The '*2100 Payables – 2120 AP/Wages'* account is for wages or salaries. Select that account and capture other data, then click on '*Save'*.

When payroll is processed, each employee's salary is adjusted from the *'2120 A/P Wages'* account and allocated into the Employee's Bank account with the relevant debit/credits in the Accounting Journal.
