Machuzu ERP

Test Case Scenario

Project Management

Scenario 2

"Planning for the Project"

At this point Futures Project Management Specialist Olivia, has looked into the system to establish Dorian Adams reliability in order for her to initiate a new project for Dorian, and has discovered that indeed Dorian has been a loyal customer for which they can undertake the requested project.

Project Management

As a Project Management Specialist, Olivia does not only rely on the system capabilities to manage the project but additionally looks into the following Project Management principles;

Concept/Definition.

1. **Scope**: Interviews Dorian and acquires his entire perspective and general requirements, and they agree on a High Level statement, which is captured into the systems Project Definition.
2. **Human Resources**: Identifies Staffing requirements, skills and time.

Olivia pulls up a complete listing of employees in the organisation as below.

From the listing, Olivia scrutinises the employees she could assign to the project by clicking on the prospective ones and reviewing their entire records as below.

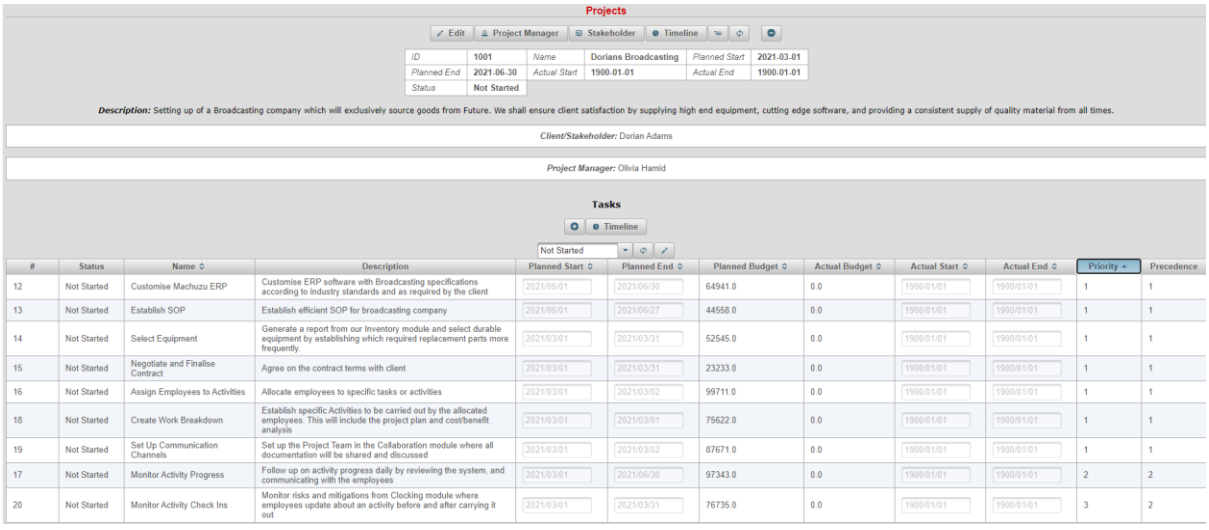

From the above, Olivia can establish how much the employee costs the company each month including benefits. She can also view Deductions including any loans the employee may have under the company. Leave taken and Trainings attended by the employee are also displayed. All this information provides a clear picture of the employees' worthiness to be allocated to the project. Particularly to establish what value the employee will add to the project, and if there are any issues which could cause the employee not to perform accordingly.

Planning

Now that the Project Scope and Definition have been established, Project Planning needs to begin.

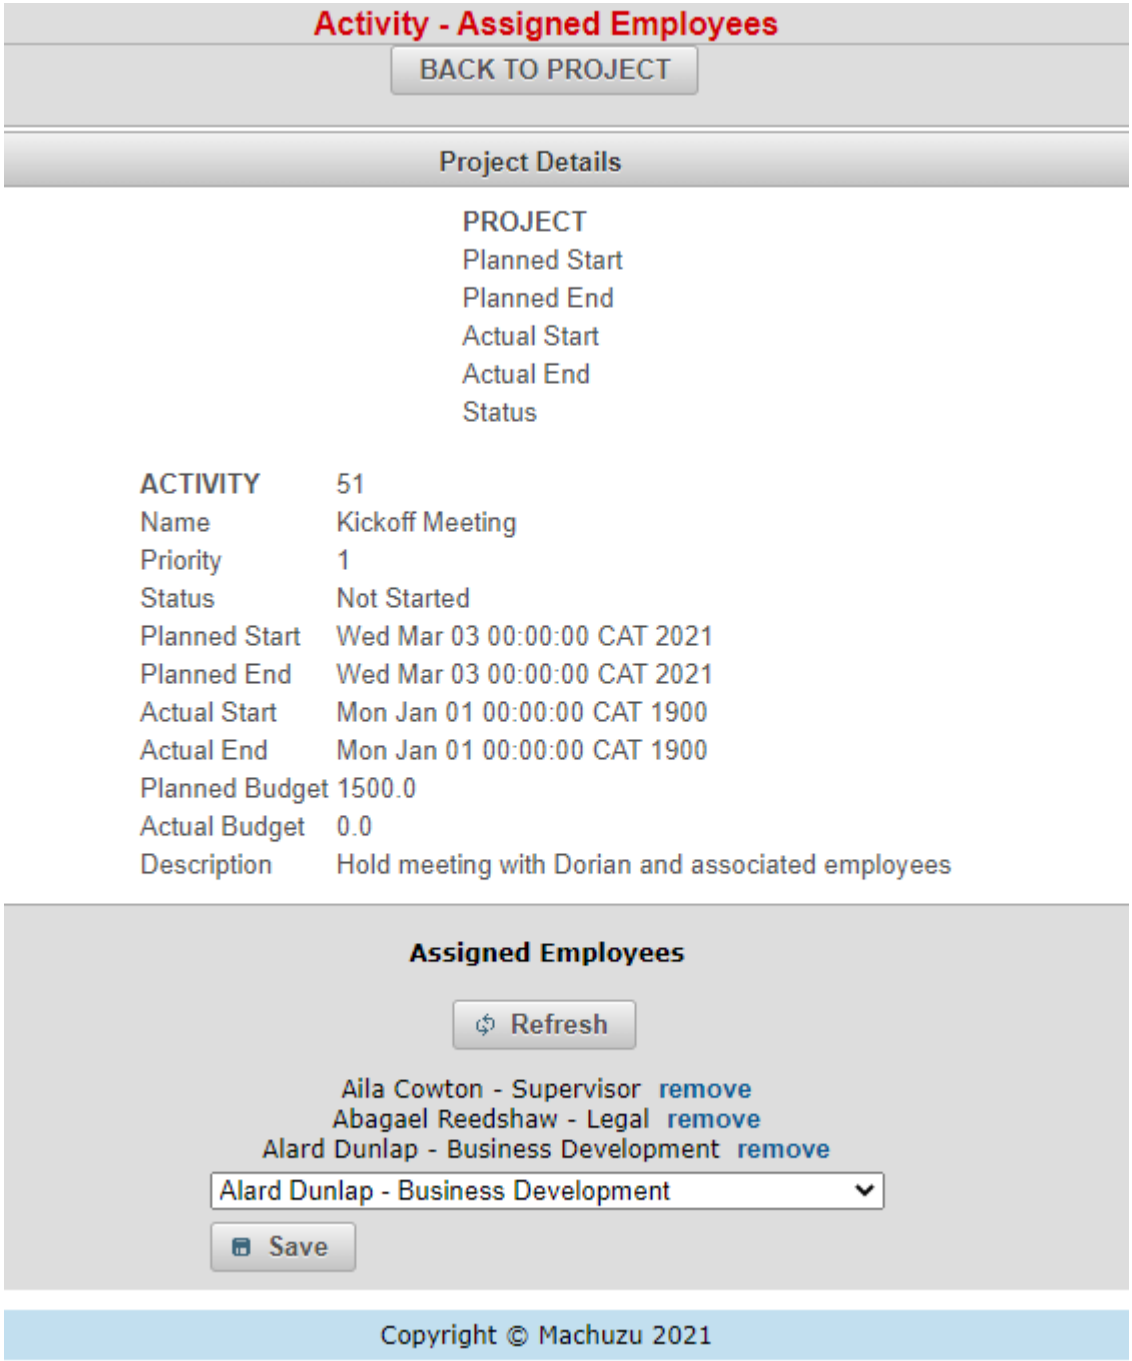

1. **Scope**: The Scope Statement needs to be solidified. This is performed by defining the project in the system as below;

Image P1.0

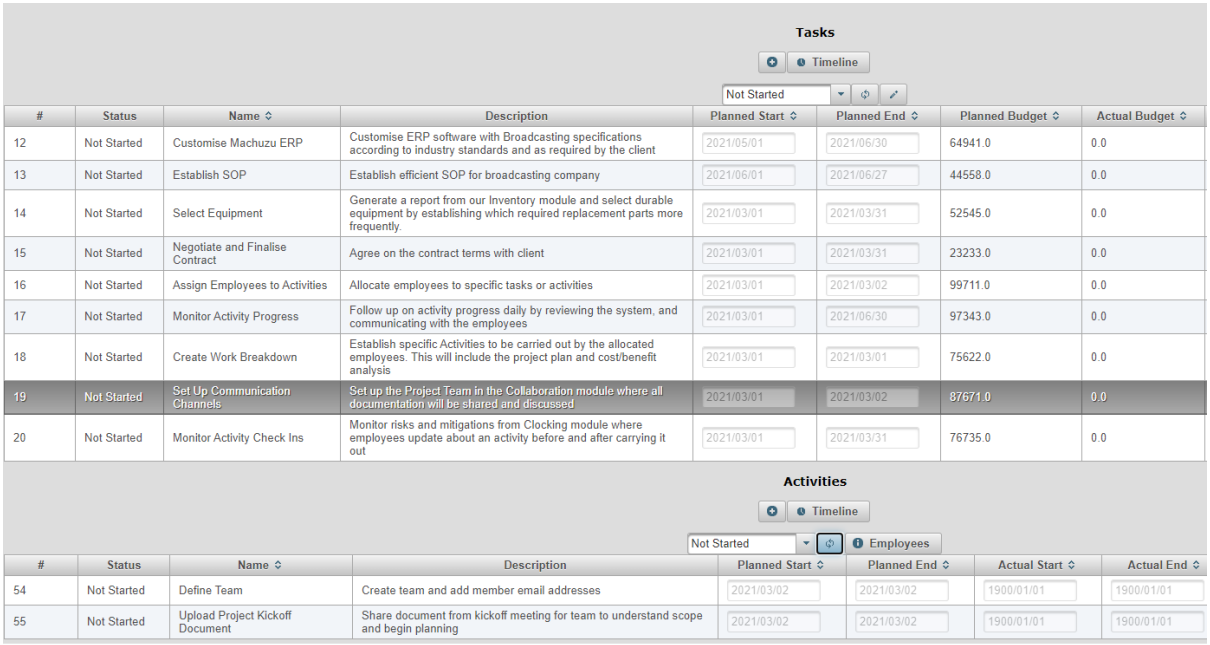

2. **Human Resources**: As displayed in Image P1.0 above, a task is specified for Approving the team, hiring staff and assigning tasks. Image P2.0 below displays the Employees assigned to the *Kickoff Meeting* Activity.

Image P2.0

3. **Time**: Work Breakdown Structure and Project Plan displayed in the Image P1.0 reflect the Planned Start and Planned End times for each Task.
4. **Cost**: Each Task is assigned a Budget Estimate as in Image P1.0
5. **Quality**: Refer to the Task for 'Select Equipment' in Image P1.0
6. **Communication**: The activities for communication are defined in the 'Setup Communication Channels' Task as displayed in Image P6.0 below.

Olivia has set the Kickoff Meeting document as the initial documentation for the project. All Team members must review this document and ensure they understand. Any question are raised as shown in Image P6.1 by commenting on the upload.

7. **Risk**: Together with the relevant teams, Olivia goes through each Task and establishes the associated Risks. These will be monitored as employees carry out the Tasks and Activities once the project has begun.

8. **Procurement**: The Equipment is selected as defined in the 'Select Equipment' Task. The Activity 'Allocate Equipment' will allow the employees to add Inventory directly from the Inventory module as they work; so as to focus on their work at hand and not have to access this Project Management module.

With all of the above, we have demonstrated how to prepare for a project with Machuzu ERP. In the last Scenario, we shall demonstrate how to manage the project.
