## Introduction

*ERPbyW* is fully fledged Enterprise Resource Planning software developed to meet all the needs of organisation's in general. The software is a result of several smaller applications that have been integrated into one single application. The largest application that has been integrated and modified was established in 2004, and has evolved over the years to eventually make up the Finance or Accounting module of *ERPbyW*. There are two versions of the software; one is available on the cloud and the other as a standalone application which can run on local networks.

This software is mainly designed to be accessible on the internet from any device (laptop, smart-phone, tablet etc). One of the main objectives of the software is to enable organisations and their staff to be productive at all times by being able to access their work, interact with clients or collaborate with colleagues.

## Registering as a user

To register as a user; click the  icon on the homepage.

On the next page; click "Register" [Don't have login details? Register.](#)

Enter all the fields on the screen that appears. If you are an individual, you can leave the *Company* field blank.

Click  to save your profile.

The system will then notify you if the registration was successful or not. If not, check that all fields have been captured and try again.

**NB:** This registration method is applicable to users who will only want to register themselves; where their account will not associate with any other registered user's account. Therefore organisations that require multiple users to be registered should kindly send us a request.

Once registered, navigate to the homepage and click on  again to login.

## Customer Relationship Management (CRM)

The CRM module enables you to capture your customer's details and keep track of all their interaction with your organisation.

To create a new customer profile, click on "*New Customer*".

Enter all the available details then click on "Save".

To edit a customer record, click on "*Edit Customer*". Select the customer, edit the record then click on "Save".

Transactions are usually launched from other modules, such as in the Finance module when a receipt is created.

To view or query transactions by the customer, click on "*View Transactions*". Select the date range of the transactions you are interested in then click "View".

## Services

The services module allows you to define all the professional services you provide.

To define a new service, click on “*New Service*”. Enter all details then click “*Save*”.

To view and edit a service, click on “*View Services*” and select the relevant function.

You can also view all transactions that have been processed in the system for services. Whether the service was used in a quotation, invoice or receipt, you can simply generate a report telling where it was used and for which customer.

## **Inventory**

The inventory module enables you to define all your inventory. The system will automatically adjust the stock levels when you create a receipt, and you will be reminded when the stock is about to reach its re-order level.

To define new inventory, click on “*New Inventory*”. Enter all details then click “*Save*”.

To view and edit inventory, click on “*View Inventory*” and select the relevant function.

You can also view all transactions that have been processed in the system for an inventory item. Whether the inventory was used in a quotation, invoice or receipt, you can simply generate a report telling where it was used and for which customer.

## **Human Resources Management (HRM)**

The Human Resources module allows you to keep records of all your employees and payroll. This module is linked to our Electronic Recruitment (e-Recruitment) platform at <http://hrm-byw.rhcloud.com>, which will enable you to advertise jobs and recruit staff online.

To set up a new employee record, click “*New Employee*”. It is recommended to enter data in all the available fields. This version (version 1) of the system currently does not calculate PAYE. Details of deductions and benefits are captured at a later stage. Click “*Save*” to save the employee record.

To view employee records, click on “*View Employee*” then click “*view*” next to the employee whose record you would like to view.

The screen that appears will display the following details about the employee;

1. Personal Details
2. Leave Defaults (Total leave days per year etc.)
3. Leave applications
4. Used up leave days
5. Remaining leave days
6. Banking details for salary
7. Benefits
8. Deductions
9. Training schedule
10. Totals (Benefits, deductions, gross salary, nett salary)

On this screen you can update all the above data by clicking “*add*” or “*delete*” under the relevant section.

To generate a payslip for the employee, click on “*Generate payslip*”. *Please refer to the “Finance” module’s section of how to set up a bank account for you to successfully proceed with the payslip.* Select the bank account from which you paid or will pay the employee from, then click “*Pay*”. The payslip is generated and you can print it out.

To manage recruitment, click on “*Manage Recruitment*”. This will take you to the recruitment portal where you will not have to set up another account or re-login. You can simply begin searching candidates, advertising jobs and reviewing job applications.

## **Finance**

This is the accounting module of the application.

The module contains the below features;

1. Invoice
2. Quote
3. Receipt
4. Statement
5. Accounts (Bank accounts, water, electricity etc)

The “*Receipt*” and “*Accounts*” modules post all transactions to the General Ledger report, where you can monitor all your income and expenditure.

To create a new Invoice, click on “*New Invoice*”. A list of all your clients will appear. Select the client you are creating an invoice for, and the date of the invoice. If you would like the system to generate the invoice every month, select “*Recurring*”. Click on “*next*”.

The services you defined in the “*Services*” module will appear. Select all the services you are creating an invoice for, then click “*Next*”. If there are no services for the invoices, click “*Next*” without selecting anything.

The Inventory you defined in the “*Inventory*” module will appear. Select all the inventory you are adding to the invoice, then click “*Next*”. If there is no inventory, click “*Next*” without selecting anything.

The Invoice will then be displayed. You can download a PDF copy of the invoice by clicking “*Download Invoice*”.

To create a Quotation and Statement, repeat the steps above and replace “*Invoice*” with “*Quote*” or “*Statement*”.

To create a new Receipt, click on “*New Receipt*”. A list of all your clients will appear. Select the client you are creating an receipt for, and the date of the receipt. If you would like the system to generate the receipt every month, select “*Recurring*”. Click on “*next*”.

Select the services to receipt then “*Next*”. Select the inventory to receipt then “*Next*”.

The services, inventory and amount due will be displayed in the next screen, Enter the amount being paid by the customer in the “*Received*” box. Click on “*Create Receipt*”.

The receipt will be generated displaying the services, inventory, their totals, amount received and change.

You can print a PDF copy of the receipt by clicking “*download*”.

To view created invoices, receipts, statements and quotes, click on “*View*” for the relevant function, select the date range, and click on “*View*”.

To define a new account, click on “*New Account*”. Enter all the fields then click “*Save*”. An account is any entity that receives or pays money to your organisation.

To adjust or reconcile account, click on "*Make Payment*". Select the account from which money will be deducted from then click "*Select*". Select the account into which money will be deposited and click "*Select*". Enter the amount to pay then click "*Pay*". The system will deduct the specified amount from the first account and deposit it into the second account. The transaction will be recorded in the general ledger report.

To view all financial transactions that have occurred in the system click on "*General Ledger*". Enter the date range of the transactions you would like to see then click "*View*".

## **Collaboration**

This module is best used by an organisation to effectively collaborate with staff members.

Individuals can make use of this module as a Document Management platform.

Groups enable you to specify the email addresses of all the people you would like to classify and make certain publications available to.

To create a new group, click on "*Groups*" then "*New*". Enter the name of the group, select the type, enter the email address of all the people to include in the group, then click "*Save*". You can add or delete email addresses by editing the group.

The Reports module enables you to upload documents that are reports. The report is made accessible only to the group under which it was uploaded and the people defined in the group receive notifications when a report is uploaded. Group members are able to discuss a report once uploaded.

To upload a report click on "*Reports*", then "*Upload New*". Select the group under which to upload the report. Select a file to upload, then click on "*Upload*". The report is uploaded and notifications sent to all group members.

If you click on "*Reports*" on the left side of the screen that have reports uploaded will be displayed. Only groups where your email address is defined will appear on your dashboard. Select a group to view all reports that have been uploaded to it. You can then view the report. To discuss the report click on "*discuss*". A "*conference*" will be create for the report. The conferencing feature will be enhanced to become fully fledged web conferencing in version 2 of the software. Click "*discuss*" again to add a comment about the report. All comments added by the different users will appear under the report.

The *Minutes* and *Documents* modules operate exactly as the module explained above.

## **Messaging**

This module enables you to send out sms and email messages to the customers defined in the CRM module.

You are able to keep track of all sent sms's and emails, and can set the system to automatically send out messages.

This service is only available upon request.

## **Customising this product**

We realise that every organisation has it's unique processes. This usually creates a loophole with many excellent ERP products that are available in the market because most of the time they do not cater for all the unique processes of an organisation, but contain static functionality that is updated in perhaps 2-5 year periods.

We will customise this package at any time of the year for it to meet your organisation's specific requirements.

### **Migrating from previous system**

Most organisations already have ERP software, but are faced with several challenges such as support, and the customisation issue above.

We will ensure that all your data from the previous system is permanently backed up, and we will migrate the data to our system for you to simply continue working from where you left off.

### **Support**

As our system is cloud based, it is available for use 24/7. Therefore we will be readily available to provide support for you anytime you require.

### **Upgrades**

Major upgrades will mainly be available annually. Only upgrades of customisation will be available after they have been requested and performed at any time of the year.

### **Pricing**

#### **SME (1-5 users)**

##### Annual Costs

|                                      |                |
|--------------------------------------|----------------|
| Annual License Fee:                  | R 2,000        |
| Major upgrade install & setup costs: | R 500          |
| Major upgrade related costs:         | R 500          |
| Training:                            | R 500          |
| Maintenance contract term in years:  | 1              |
| Price increase at end of each term:  | 2.5%           |
| <b>Total:</b>                        | <b>R 3,500</b> |

#### **SME (5-10 users)**

##### Annual Costs

|                                      |                  |
|--------------------------------------|------------------|
| Annual License Fee:                  | R 4,000          |
| Major upgrade install & setup costs: | R 500            |
| Major upgrade related costs:         | R 1,000          |
| Training:                            | R 1,500          |
| Maintenance contract term in years:  | 1                |
| Price increase at end of each term:  | 2.5%             |
| <b>Total:</b>                        | <b>R 7000,00</b> |

**Corporate** (unlimited users)Once-Off Costs

|                                      |                    |
|--------------------------------------|--------------------|
